Ultimo

A fully automated awning, offering protection for you and your furnishings.

Weathermaster®

Weathermaster Ultimo

Full cassette folding arm awning

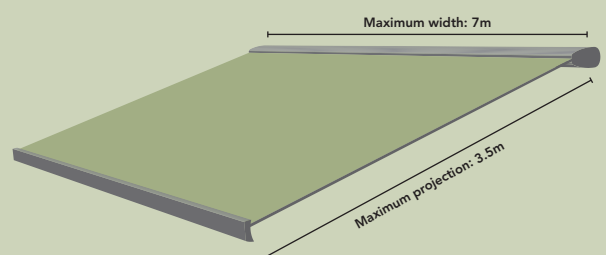

Extend your outdoor lifestyle with one touch of a button, the Weathermaster Ultimo awning extends to put an attractive shade barrier between you and New Zealand's harsh ultraviolet rays. Custom-made to fit your property, and available in an extensive range of fabric choices, it adds value and style to your home.

What's great about this awning?

- Custom-made for your property
- Contemporary European design
- From 2.5 to 7 metres wide
- Range of projection: 2m, 2.5m, 3m or 3.5m
- Automated operation with remote and wall switch options available
- Can be integrated with home automation systems
- Extensive range of fabric colours
- Heavy-duty folding arms with high strength Dyneema® connections
- Full cassette housing protects awning from the elements when not in use
- Cassette and arm components available in anodised silver or white powder coat
- Décor kit for stylish finishing touches, available in three colour options
- Heavy-duty springs ensure optimum fabric tension at all times
- Three year guarantee

Choose which size is right for you

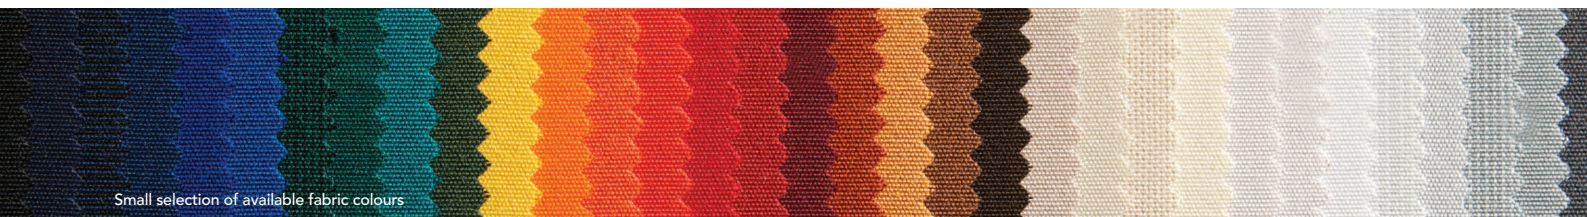

Weathermaster Ultimo awnings are available in a variety of sizes, up to 7m x 3.5m. Talk to your Weathermaster consultant about available options.

Weathermaster Ultimo

Features and options

Colour range

Awning fabric is available in a vast selection of solid colours and patterns. It is water-repellent, marine-grade 100% acrylic with a UPF rating of 50+. Fabric will not break down and is fade resistant. Contact your nearest Weathermaster distributor to see the full range of fabric options available.

Small selection of available fabric colours

1 Protective cassette housing

When not in use, the Weathermaster Ultimo awning is entirely enclosed by a protective aluminium cassette. This ensures that fabric and components are shielded when not in use.

2 Automated operation with optional wind/sun sensor

Using premium European electric motors, the Weathermaster Ultimo awning extends or retracts with the push of one button. Choose remote control, wall switch or both. Awning controls can be integrated into home automation systems. Your awning can also have a wind/sun sensor, which will automatically close the awning once the wind reaches the programmed safety level or extend the awning when sun is detected.

3 Superior components

Arm components are made from pressure die-casted corrosion-resistant aluminium; arm profiles are manufactured from extruded corrosion-resistant aluminium. Elbow joints have Dyneema® connections to improve the stability of the awning. Heavy-duty springs ensure optimal fabric tension at all times – water runs off if it rains, helping to ensure longevity of the awning fabric.

4 Décor kit

You can add extra style to your Weathermaster Ultimo awning with an integrated décor kit, which includes covers for the end caps and a decorative strip for the front profile. Décor kits are available in silver, white or graphite.

5 Choice of component colours

Arm and cassette components are available in silver anodized or white powder coat.
