# Your Environment

## Impact of sun on your home

Throughout the day, the sun moves from sunrise in the east through the north sky and sets in the west. This means the amount of heat from the sun received by a window varies according to orientation and time of year. In summer, the sun travels higher through the sky with direct exposure to east and west windows, in winter the sun travels lower with a greater angle through north facing windows. Each home is different - window size, orientation, glazing treatment, shading and internal coverings can have a significant impact on energy efficiency and comfort.

An External Screen shading a window reduces the radiant energy passing through the glass into the room. When the radiant energy touches an object inside it gets hot, making the room hot. Windows are a big source of unwanted heat loss and heat gain in your home.

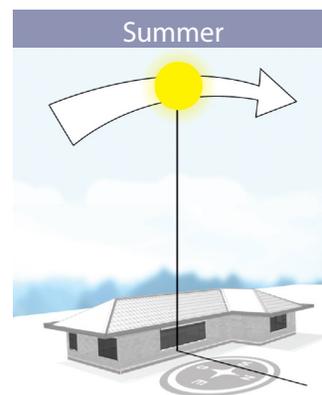

Choosing the right window coverings means you can improve the comfort of your home all-year-round, reduce your power bills and cut carbon pollution.

## Keep your home cool in summer

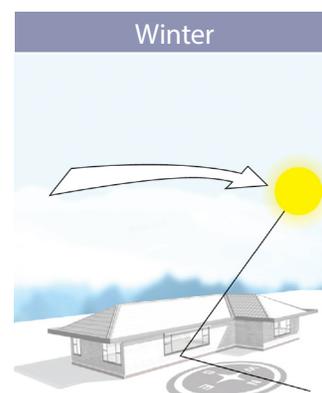

During summer, about half of unwanted heat comes through exposed windows, especially those facing east and west. Shading your windows with Alpha External Screens can minimise heat in your home to create a comfortable cooler environment – and potentially save you hundreds on energy bills.

## Keep your home warm in winter

You can control the temperature of your home in winter without relying on power-hungry heating appliances. To make the most of sunny days, open your External Screens on windows facing the sun – this will let in sunlight and warmth, and will help to minimise the need to use your heating system. Keep the warmth inside during winter using well-fitted insulating window coverings such as Weathermaster® Whisper® Cellular Shades.

# Alpha External Screen System by Weathermaster®

The Weathermaster® Alpha External Screen System represents the latest in design, styling and functionality. Offering a full suite of External Screen systems including: MagnaTrack, Side Tension Channel (STC), Cable Guide, Straight Drop, and Pivot Arm, the Weathermaster® Alpha External Screen Range offers a common, aesthetically appealing look across all products with a solution to meet every customer's need.

Selected Alpha External Screen products can span 6.5 metres wide and can withstand wind speeds up to 185 km/h for a 3.5 metre wide screen.

# Environmental Testing

## Quality testing for durability and strength

The Weathermaster® Alpha External Screen System is designed for New Zealand conditions, engineered and independently tested to withstand the harsh New Zealand climate including sun, wind and rain.

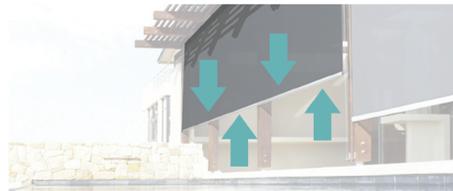

### Salt spray testing

Testing for corrosion resistance for wet weather.

### Cycle testing

Weathermaster® products are cycle tested to replicate daily use for a minimum of 7 years.

### Weight load testing

To ensure strength of all parts.

### Wind load pressure testing

Weathermaster® Alpha External Screens have been tested by an authorised and respected independent organisation to determine the maximum loads the External Screens can withstand before signs of distress and ultimate failure. This table (below) provides a guide for the wind pressure that these External Screens can withstand. We recommend External Screens are retracted in windy conditions to avoid the potential for damage.

### UV testing

Testing to ensure the colour's fastness when exposed to the damaging UV rays from the sun.

Screen System	Pressure (Pascal)	Equivalent Wind Speed
Alpha MagnaTrack*	2980	185 km/h**
Alpha STC*	630	85 km/h
Alpha Cable Guide	225	67 km/h
Alpha Straight Drop	225	67 km/h
Alpha Pivot Arm	50	

These results are based on an External Screen size 3300 x 2450mm.

\* From a static wind test on a 3500mm wide screen.

\*\* Up to 89 km/h for a 6.5 metre opening width.

Image depicts Alpha External Screen System with Pivot Arm

Image depicts Alpha MagnaTrack External Screen System

# MagnaTrack

The Alpha MagnaTrack screen system has been engineered and tested to handle our diverse and unforgiving conditions and is the most technologically advanced outdoor straight drop screen on the market.

## Ultrawide Spans with Premium Spectra Fiberglass Sunscreen Fabric

The Alpha MagnaTrack screen system can accommodate widths up to 6.5 metres and drops of 4 metres and is exclusively available with our premium Spectra Sunscreen fiberglass fabric range. Spectra Sunscreen features a sophisticated twill weave with subtle elegant diagonal patterns and is available in a range of contemporary colours to suit all homes.

## The Strongest Wind Tested Straight Drop Screen

The Alpha MagnaTrack screen system has been independently tested by James Cook University's Cyclone Testing Station in Australia to withstand wind pressures up to 185 km/h for a 3.5 metre opening width, and up to 89 km/h for a 6.5 metre opening width, making it New Zealand's strongest wind tested straight drop screen system.

## New Zealand's First and Only Self-Correcting Awning System

With the patented magnet technology, the Alpha MagnaTrack is the only straight drop screen system in New Zealand that has a self-correcting feature. This allows the fabric skin to effortlessly return into the channel should it ever become dislodged - minimising the extra time and labour required to go onsite for a service call. As the Alpha MagnaTrack retracts, the magnets continually pull on the fabric to feed it back inside the screen guide, allowing the Alpha MagnaTrack to be operated as usual.

## Patented Self Tensioning Magnetic Track System

The magnetic bond of the Neodymium Magnets allows the fabric to move while under wind pressure as it floats within the channel. After the wind pressure subsides, the magnetic bond of the Neodymium Magnets will automatically re-tension the fabric back to its original appearance - a world first in functionality. This can be done quickly and easily by using the remote control.

# MagnaTrack Features & Benefits

Alpha MagnaTrack harnesses the power of Rare Earth Neodymium Magnets within the side channels to hold the fabric in place providing a smooth flat finish with unparalleled strength. Alpha MagnaTrack is the perfect addition to outdoor entertaining areas, allowing you to enjoy your outdoor space while maintaining sun, wind, and rain protection as well as light control and privacy all year round.

## Rare Earth Neodymium Magnets

The technology behind the Alpha MagnaTrack screen system lies deep within its patented design. The side channels employ the use of Rare Earth Neodymium Magnets in both the side track and the adjustable track insert that holds the fabric. These magnets are the strongest and most powerful magnets commercially available and on an average sized awning, provide over 100kg of magnetic force on each side, keeping the fabric on the awning looking beautifully smooth, flat and taut.

Neodymium Magnet

## Keder Interlock

Unlike a standard zip system, the Alpha MagnaTrack uses a heavy duty keder interlock system to attach the fabric within the awning. This allows for a more robust system which is less prone to failure compared to a zip system. The flexible PVC keder core is embedded in a highly durable Teflon® coated polyester and has a high tear strength to withstand harsh conditions.

Keder Interlock

## Internal Headbox Roller Brush

There are two brushes located inside the headbox to prevent insects, spiders, and wasps from getting inside and creating nests. The added benefit of the dual brush set up helps to keep the fabric clean while the screen is being operated. This will increase the longevity of the MagnaTrack screen.

Internal Headbox Roller Brush

## Heavy Duty Bottom Rail

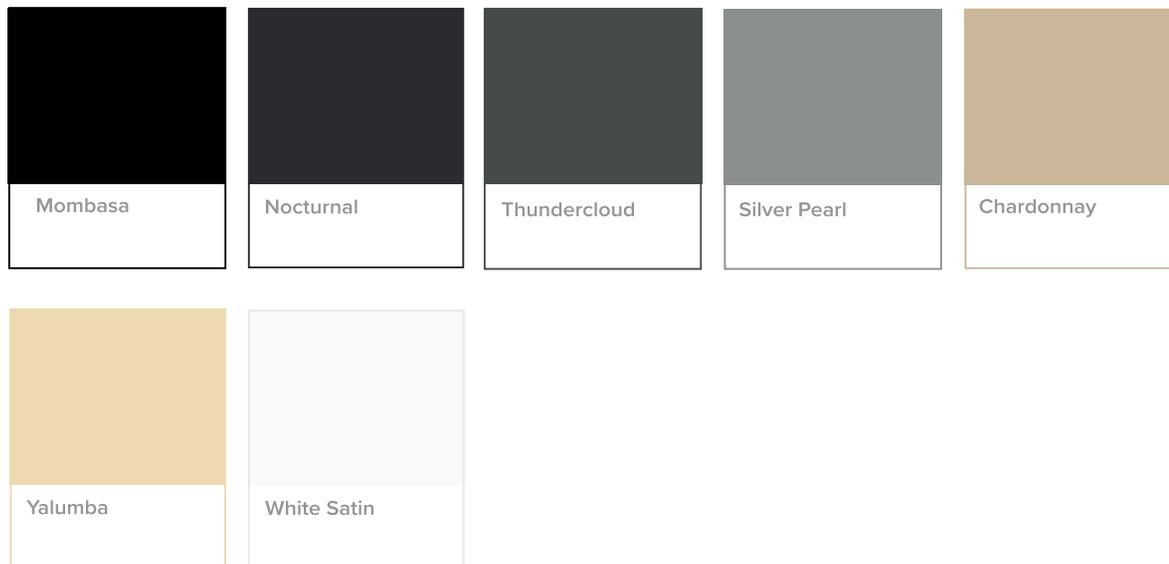

The Alpha MagnaTrack has a heavy duty bottom rail to allow for smooth and consistent operation while keeping the fabric looking flat. It also features an insect brush to reduce light gaps, insects and debris from entering.

Heavy Duty Bottom Rail

# MagnaTrack Options & Specifications

## Hardware Colour Options

Available in 7 contemporary colours. Custom Powdercoat option is not available. Colours are as close as printing process will allow.

## Fabric Options and Specifications

### Spectra Fibreglass Sunscreen Fabric

Exclusive to Alpha MagnaTrack, the Spectra fabric range is made with Enduris™ Glass Core Technology. The fibreglass core provides significantly improved tensile strength over generic polyester core alternatives. Spectra Fibreglass Sunscreen is constructed using a twill weaving technique making the fabric highly durable and fade resistant. Spectra offers excellent solar heat and UV protection from the harsh New Zealand sun, while allowing diffused light to pass through. Spectra Fibreglass Sunscreen is inherently flame resistant and has passed the Fire Retardant Test to AS1530 Part 2 standard, making it suitable for both residential and commercial applications.

Available in both 3% and 1% openness in a range of contemporary colours.

FABRIC	ROLL WIDTH	COMPOSITION
SPECTRA FIBREGLASS	3200mm	GLASS 41.5%, PVC 58.5%

## Operating System

### Automation

Alpha MagnaTrack is exclusively available with a Somfy® motorisation option. The motor solution allows the screen to be operated at the touch of a button, via a wall switch control, and even phone or voice via Somfy® connexion - giving you the ability to control all Somfy® products, both blinds and awnings, in one app.

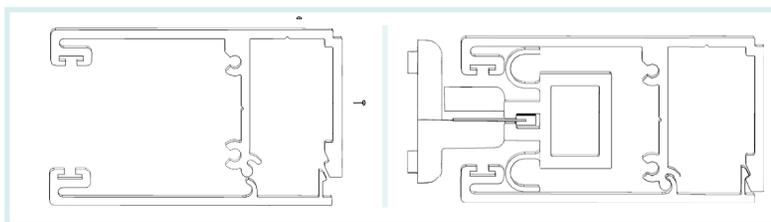

Image depicts Alpha External Screen System with Side Tension Channel

## Side Tension Channel (STC)

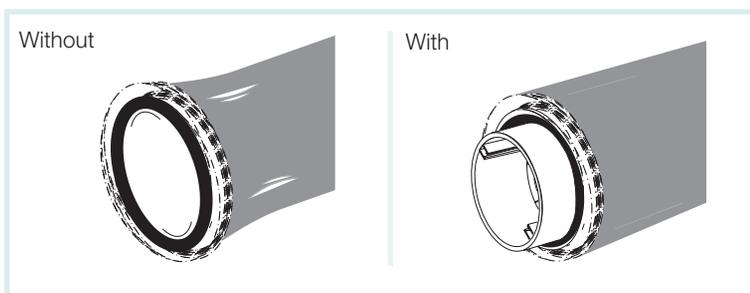

The Weathermaster® Alpha STC External Screen is a premium and versatile Straight Drop option ideal for sun/UV protection, insect resistance, windy applications, enclosing a balcony as well as light and heat control.

The fabric is tensioned by utilising a floating channel and is ideal for enclosing courtyards, patios or balconies - essentially adding an extra room to the home as well as eliminating fabric blowouts. Two Piece Side Channel – By utilising a common installation channel the front channel simply snaps over the installation channel to provide a neat, clean finish meaning no screws and rivets are visible.

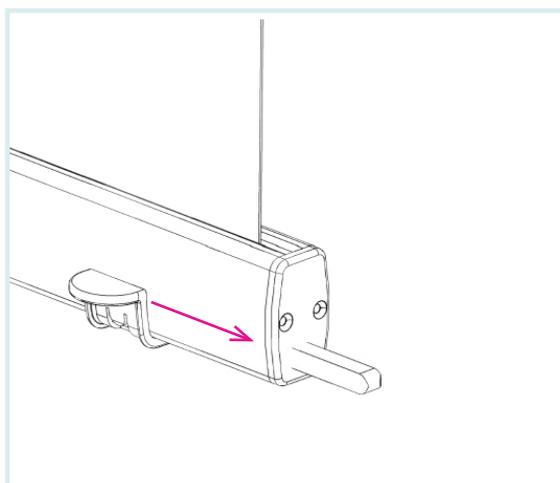

### Flexible installation

The floating channel creates installation flexibility as the fabric can “float” within the side channel and accommodate some out of square mounting surfaces and fabric shrinkages. The floating channel feature will also move with the wind and take strain off the welds and joins in the fabric. Clever sound bumpers have been incorporated into the floating channel to minimise noise when operating or in windy conditions.

### Tube reducers

There is potential for fabric thickness build up at the end of the roller as the Screen is raised. The use of custom designed tube reducers minimises this build up, thereby ensuring the fabric rolls as symmetrically as possible, whilst the Screen is in operation. This keeps the fabric flat and reduces the rippling effect.

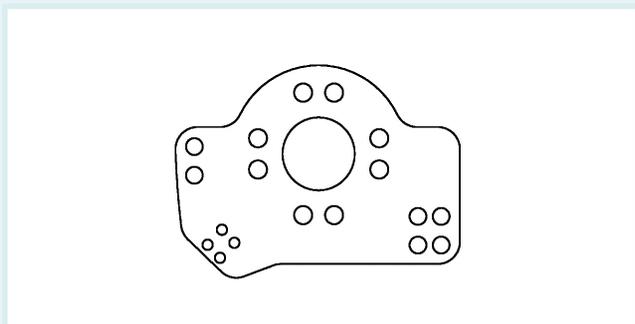

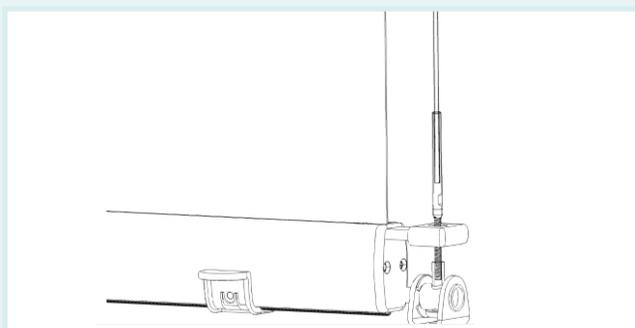

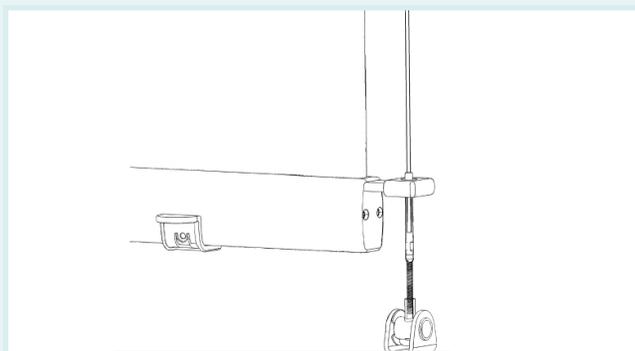

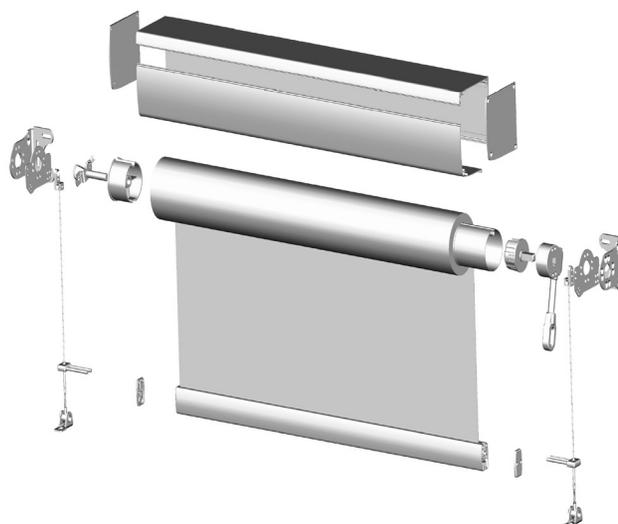

### Locking bolt

The locking bolt can be used with all Weathermaster® Alpha External Screen Systems. The locking bolt allows you to secure the bottom rail by simply sliding the bolt into the selected hole position in the side channel or post. This feature holds the fabric taut and minimises bottom rail movement.

## Cable Guide System

The Weathermaster® Alpha Cable Guide External Screen is a great contemporary Straight Drop option ideal for: sun/UV protection, air flow and where channels are not suitable. The cables are made of high tensile 2.5mm 316 grade marine stainless steel, making them perfect for coastal applications.

The Weathermaster® Alpha Cable Tensioner set has been designed for adjusting at the bottom of the External Screen thereby reducing the need to be up a ladder. Simply install the universal bracket to the floor or parallel to the top cable bracket. Loosely attach the cable swage at the bottom, carry the cable to the top cable bracket and lock off. Return to the bottom of the External Screen and tighten the swage to add additional tension.

### Bottom rail end caps

Have been designed to “float” to accommodate instances where the cable is not straight creating a smooth operation without putting pressure on the cable.

### Locking bolts

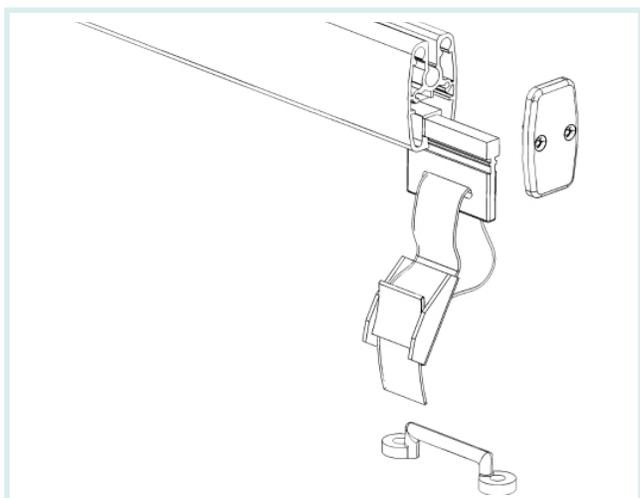

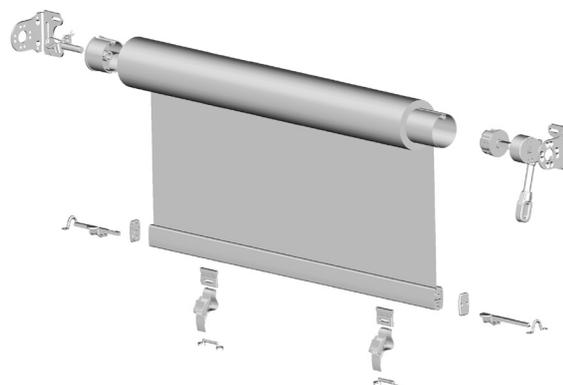

Locking bolts can be used with the Cable Guide System when the External Screen is fully lowered. The locking bolt simply inserts into the universal floor and wall mount bracket to hold the fabric taut and minimises bottom

### Extension plate / Front roll

The extension plate combined with the open headbox can be used with the cable guide External Screen for front roll applications. It can also assist with top and reveal fit installations by making the top cable bracket more accessible.

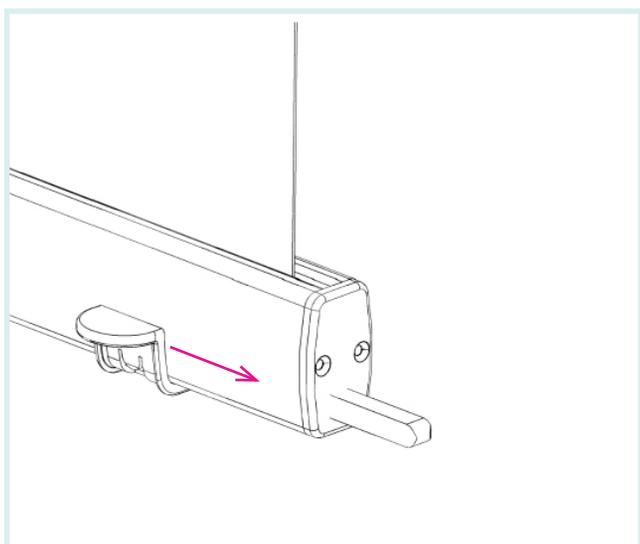

## Straight Drop System

The Weathermaster® Alpha Straight Drop External Screen is a traditional External Screen style that uses no guides making it ideal for: sun/UV protection, air flow and where channels are not suitable. The External Screen is strapped down to a railing or floor. The absence of side channels or cable guides means it is priced as an entry level product for the Weathermaster® Alpha External Screen System.

### Hold down strap

Hold down straps can be used to hold the External Screen down to a railing or floor at various points across the width of the Screen giving maximum flexibility for installation.

### Locking bolts

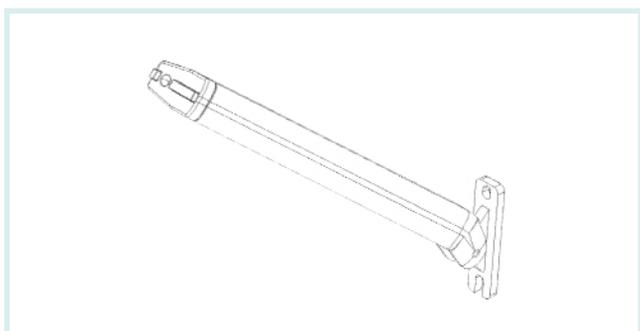

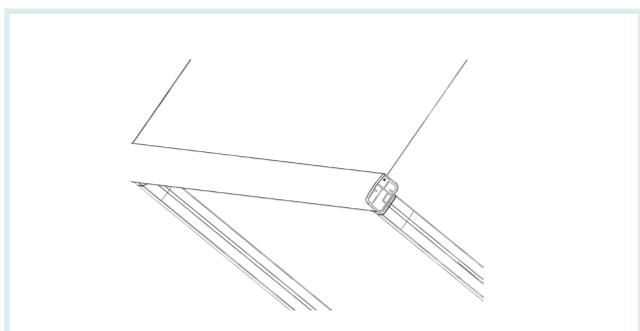

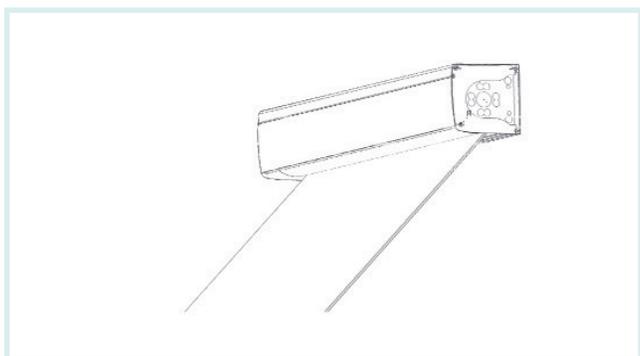

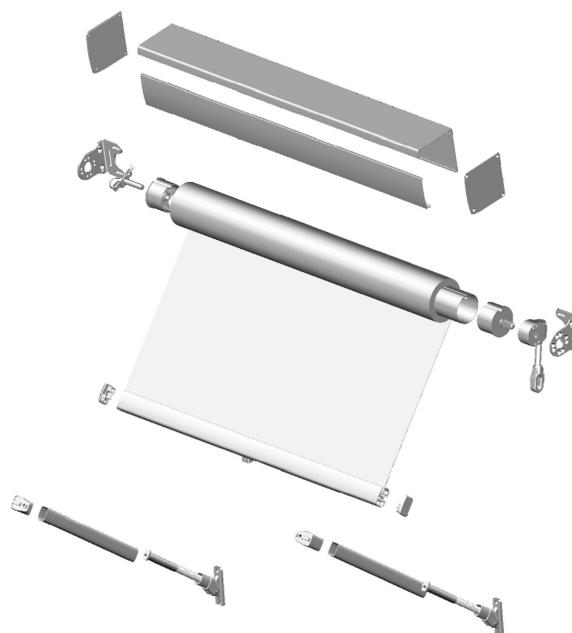

Locking bolts can be used to secure the External Screen at the ends of the bottom rail. With the Straight Drop External Screen, you can use locking bolts to either insert into a reveal / post situation or alternatively use a breaching staple on the ground or balcony for the bolt to slide under.

Image depicts Alpha External Screen System with Pivot Arm

## Pivot Arm System

The Weathermaster® Alpha Pivot Arm Awning projects the fabric off the window, with the arms and fabric forming a canopy that allows air to flow behind the Awning and for windows to be open whilst the Awning is projected. This system is a heavy duty contemporary design ideal for larger windows.

### Headbox

The open headbox is required for this awning to allow for the angle of the fabric. With the same design curve as the closed headbox, aesthetics are consistent across all Weathermaster® Alpha Awning products.

### Front rail

The front rail has been designed to have the same design curve as the Straight Drop bottom rail to create consistency across the Weathermaster® Alpha Awning range.

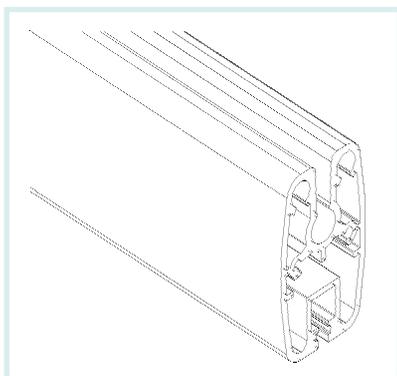

### Heavy duty pivot arm

The heavy duty spring incorporated in the Pivot Arms provides excellent fabric tension even with Awning widths up to 5 metres. Complete with a modern anodised finish the pivot arm complements our standard Silver Pearl hardware.

# Standard Alpha External Screen Systems

## Features & Benefits

### Bottom rail

The multi-functional bottom rail offers a variety of features whilst maintaining a subtle modern design curve to seamlessly blend with the headbox aesthetics.

#### Bottom rail weight bar

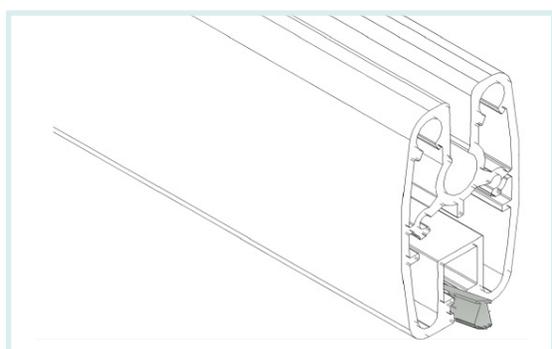

The bottom rail has been designed with a weight of 1.2kg per metre effectively reducing bottom rail flex. With the option to increase the bottom rail weight to 2.2kg per metre, the Weathermaster® Alpha External Screen Range keeps fabric taut and assists in minimising bottom rail "bounce" in windy conditions.

#### Locking bolt and hold down strap\*

With the ability to add locking bolts and hold down straps, the Weathermaster® Alpha External Screen System offers versatility for holding the fabric secure between the channels and minimising any bottom rail movement in windy situations.

The locking bolt also allows the bottom rail to get close to the ground in order to minimise light gaps.

Hold down straps can be secured at points that best suit the customer's needs and the application. The straps can be placed anywhere across the width of the bottom rail allowing the External Screen to be locked into place.

#### Insect brush

With the ability to add the pile brush to the bottom rail, the opportunity for light gaps, insects, debris, wind and rain are significantly reduced from entering your protected area. The brush also protects the bottom rail from chipping if dropped to the ground quickly.

#### Concealed spline insert

The new bottom rail is designed to cover any welds or stitching required to secure the fabric to the blind. The concealed spline maintains the clean look of the Weathermaster® Alpha External Screen System meaning an External Screen of 5m (W) x 2.9m (D) with Smart Shade External Screen fabric will have no visible welds or joins.

\* Excludes MagnaTrack.

# Standard Alpha External Screen Systems Features & Benefits

## Headbox and open roller options

Weathermaster® Alpha External Screen Systems offer two designer headbox options for increased functionality and a modern contemporary look. There is also an open roller option for a cost effective alternative.

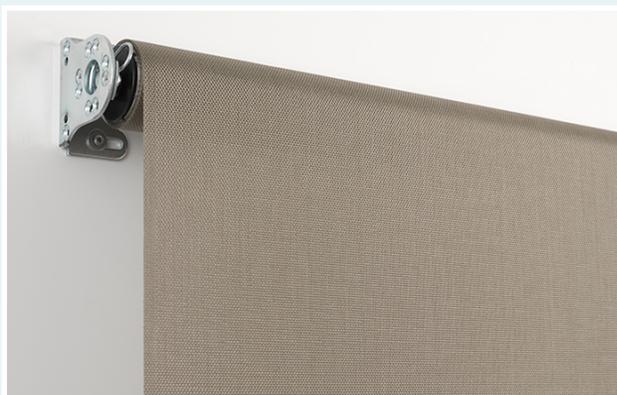

### Closed headbox

The closed headbox protects the fabric from external elements such as rain, UV and debris. This assists in keeping the fabric clean and enhances longevity.

### Open headbox

The open headbox also allows more air to circulate around the roller thereby minimising heat build up. The open headbox is also ideal for installations where there are obstructions preventing back rolled products, and is ideal for front rolled Drop and Cable Guide External Screens. (Standard option for PVC Screens).

### Open roller

A cost effective option, the open roller system offers a modern industrial look by exposing the operation componentry. By eliminating the aluminium headbox profiles, the price is reduced making it the ideal choice for the cost conscious consumer.

# Standard Alpha External Screen Operating Options

The Weathermaster® Alpha External Screen System has been developed to offer maximum flexibility and ease of use for consumer operation.

## Manual crank

The 9:1 ratio gear ensures easy operation that is not dependent on the user's strength. Specifically designed for Straight Drop applications the 9:1 ratio gear can withstand high wind situations and is available in a selection of Black, Grey and White for improved colour co-ordination with most fabrics.

There is a great range of crank handles available in: 800mm, 1200mm, 1600mm and 2000mm lengths.

## Automation

A range of external motor solutions allow the Weathermaster® Alpha External Screen Range to be operated at the touch of a button or via a wall switch control. Also available is the latest Automatic Tensioning Motor that permits the External Screen to be locked in position (with strap or locking bolt) and tensioned. Optional accessories include sun and wind sensors, integration into home automation systems providing intelligent External Screen control.

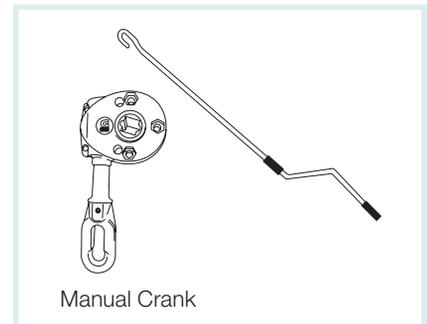

## Spring operation

Allows the External Screen to be manually pulled down to the required height and locked off using either the Locking Bolt or Hold Down Clip option (only available up to 3500mm wide x 2500mm drop).

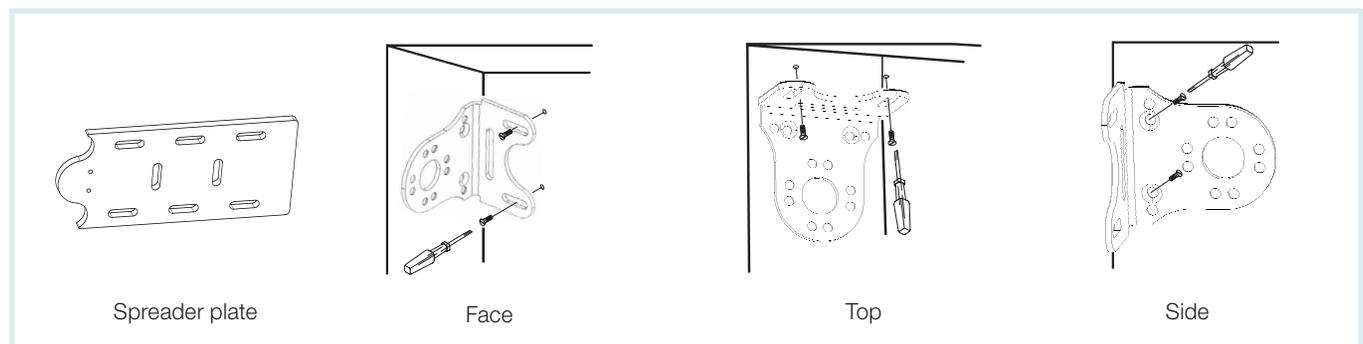

## Installation

The Weathermaster® Alpha External Screen System can be installed in different applications, including face, top, or side fixing.

By using the same universal bracket in both headbox and open roller configurations, installation is kept simple and consistent. To improve installation flexibility, an additional mounting plate (spreader) is available that can alter the fixing position by up to 250mm.

## Installation applications

# Standard Alpha Screen Options & Specifications\*

## Standard Hardware Powdercoat Colours

NOTE: Colours are as close as printing process will allow.

Custom Powdercoat options available, refer to price list for pricing.

QUALITY

Alpha componentry is designed and engineered for the New Zealand market, making it ideal for our unique climate conditions. The system is manufactured using strict quality control and inspection processes to ensure the product exceeds consumers' expectations. Backed by a Weathermaster® 5 year warranty\*\*\*, customers can have peace of mind on the longevity of their external shading solution.

\*\*\* Conditions Apply

\* Not applicable to Alpha MagnaTrack External Screens.

## Installation Overview

The Weathermaster Alpha External Screen System can be installed in different applications, including face, top or side fixing.

By using the same universal bracket in both headbox and open roller configurations, installation is kept simple and consistent across all models. To improve installation flexibility, an additional mounting plate is available that can alter the fixing position by up to 250mm on either side.

### Straight Drop External Screens

Especially simple to install, the straight drop awning option resembles similarities of a roller blind. This awning comes with hold down straps and the option of locking bolts to secure the awning when fully down.

### Cable Guide External Screens

Cable Guide screens are easily installed with the added support of side guide cables which tighten at the top and bottom to tension the cables for added support from the elements. The additional locking bolt option allows these to slide into the universal bottom brackets.

### MagnaTrack

Similar to a STC installation, the MagnaTrack install is straight forward with side channels that assist the fabric in rolling up and down using magnets. These magnets are pre-installed into the side channels to ensure a fast and smooth installation.

### STC External Screens

These awnings follow a similar installation process with the addition of side channels. The side channels have floating guides which allow the fabric to connect securely into the main channel (like a zipper) allowing a superior finish when down.

### Pivot Arm Awning

These awnings can be fitted face fit or side fit. The heavy duty spring loaded pivot arms provide excellent fabric tension even with awning widths up to 5 metres. Simply install the headbox or open roller as normal, install and connect the arms to the bottom rail and you're ready to go.
